Professional Summary

Fresher DevOps Engineer with hands-on experience building end-to-end CI/CD pipelines using Jenkins, containerizing applications with Docker, orchestrating deployments on Kubernetes and Amazon EKS, and provisioning AWS infrastructure with Terraform. Built production-style DevOps projects leveraging Infrastructure as Code, containerization, Kubernetes orchestration, and deployment automation across AWS environments.

Technical Skills

Cloud Infra: AWS (EC2, IAM, VPC, S3, RDS, EKS), Terraform, Ansible, Linux, Bash, Shell Scripting

DevOps Tools: Docker, Kubernetes, EKS, Jenkins, Git, GitHub Actions, YAML, Docker Compose

Monitoring: Prometheus, Grafana

Programming: Python (Flask, Boto3), MySQL

Projects

CI/CD Pipeline on Amazon EKS using Jenkins [\[GitHub\]](#) *Jenkins, Docker, Kubernetes, Amazon EKS*

- Built an end-to-end CI/CD pipeline integrating GitHub, Jenkins, Docker Hub, and Amazon EKS for automated application delivery.
- Containerized a static web application using Docker and automated image build, versioning, and publishing through Jenkins pipelines.
- Configured GitHub Webhooks to automatically trigger Jenkins builds on source code commits.
- Deployed workloads on Amazon EKS using Kubernetes Deployments and LoadBalancer Services with rolling update strategy.
- Automated build, push, and deployment workflows, reducing deployment effort by over 80 percent.

End-to-End CI/CD Pipeline with Jenkins, Kubernetes and Terraform [\[GitHub\]](#) *Jenkins, Docker, Kubernetes, Terraform, AWS*

- Engineered a complete CI/CD pipeline integrating GitHub, Jenkins, Docker, and Kubernetes for automated build, push, and deployment of a Flask application.
- Containerized Flask application using multi-stage Docker builds, reducing image size and improving deployment efficiency.
- Automated Docker image build and push to Docker Hub via Jenkins pipeline with secure credential management.
- Provisioned AWS EC2 infrastructure (1 master, 2 worker nodes) using Terraform.
- Deployed application on a 3-node Kubernetes cluster using rolling update strategy, achieving zero-downtime releases.

AWS Cloud Infrastructure Dashboard [\[GitHub\]](#) *Flask, AWS Boto3, Docker, Jenkins*

- Developed a Flask-based dashboard to monitor EC2 instance health, state, and status in real-time.
- Integrated AWS Boto3 with IAM instance roles, eliminating hardcoded secrets.
- Containerized application using Docker and Docker Compose, reducing setup time from 25 minutes to 10 minutes.
- Designed Jenkins CI/CD pipeline to automate build and deployment, reducing release time from 15 minutes to under 5 minutes.

Education

Trinity College of Engineering and Research
B.E. Computer Engineering, 8.73/10 CGPA

Pune
2019 – 2023

Certifications

DevOps course — Ethans Tech

AWS Cloud Training — Ethans Tech

Python Bootcamp — Jose Portilla (Udemy)
